

## **Audiophile Headphone Market is estimated to be US\$ 466.56 Million by 2030 with a CAGR of 7.7% during the forecast period**

High-fidelity headphones are known as [Audiophile Headphones](#). Consumer demand for stylish and high-fidelity headphones is driving technological developments in headphones. Headphones featuring advanced features like active noise cancellation (ANC) and near-field communication (NFC) have been introduced to give users a better listening experience and more connectivity options with their music devices. For example, active noise cancellation (ANC) technology in headphones reduces background noise, resulting in better sound quality. By just tapping the wireless headphones and the music device, near-field communication (NFC) allows the user to connect them.

- Sonos Roam, the ultra-portable smart speaker designed to deliver terrific sound at home and on any trip, was released in March 2021.

### **Analyst View:**

The need for mobile accessories has expanded significantly as a result of the introduction of portable infotainment devices such as laptops, mobile phones, and tablets. For data transfer and music streaming, smartphones use wireless audio technologies such as Bluetooth and Wi-Fi. These wireless technologies, such as Bluetooth or Wi-Fi, allow smartphones to broadcast music to wireless speakers or headphones in a simple and convenient manner. As a result, the expansion of the wireless audio device market is fueled by the increasing adoption of smartphones. Apple, for example, utilises AirPlay, a wireless audio technology built into iPhones that allows users to broadcast multimedia material to other AirPlay-enabled and licenced devices. As a result, one of the primary drivers driving the worldwide expansion of the wireless audio device market is the thriving infotainment devices market.
